

## CHAPELSAVE

ChapelSave has been developed by the General Assembly to help local congregations save money. It is estimated that collectively the Movement could save approximately £100,000 this year just by "Buying Smarter" when purchasing electricity and gas.

We are therefore pleased to announce the joint utilities saving partnership between the GA and the leading corporate and charity energy broker LSI. LSI provide bespoke services for energy procurement for the National Council for Voluntary Sector (NCVO), MIND, Harvey Nichols, Leeds Rhinos to name a few clients.

By utilising professional brokers we are able to offer an excellent level of support and the ability to access special prices that benefit from massive collective buying power. The process is straightforward and **you stay in complete control of all decisions.**

Experience has shown that Chapels can have been incorrectly charged Climate Change Levy amounting to £1000's of pounds, and this can be reclaimed on top of the savings made by securing the correct contract.

You can apply for a quotation from LSI up to six months ahead of the expiry of your current contract and you only need 2 documents to see how much you could save.

1. You will need a copy of your latest utility bill
2. A completed letter of Authority (this enables LSI to contact your existing provider, no change can be made without your permission)

Send these or scan them to;
